1. New Ciao Radio News Group Int fully English language

Yahoo group: CiaoRadioNewsGroupInt
Date: 2007-12-04 13:05:37 UTC
From: ReClaudio
Topic: 1 Message: 1

Following Ralf suggestion I created a new group at yahoo.com .
Also the labels are now in English at :

<http://groups.yahoo.com/group/CiaoRadioNewsGroupInt/>
http://groups.yahoo.com/group/CiaoRadioNewsGroupInt/

I would suggest to migrate there and to unsubscribe from
:CiaoRadioNewsGroupInternational@yahoogroups.com

When all the members will be on the new NG , I could terminate this
one .
Please remember to migrate also the files .

Thanks for your cooperation and patience ....
73-Claudio I1RFQ

Hi Claudio,

many thanks for recreating the international group at yahoo.com. That was certainly the best
solution, especially as the old international group was still in its initial stage, which makes
migration easier.

I'm sure that all non-Italian speaking members will appreciate your effort.

Hi Ralf .

I have to tell the truth , without your suggestion I will never had idea how
to switch language

So the thanks are for you !

Another big problem could be to copy about 50 MB of files (99% in English)
from the Italian group .

Luckily for this Ron Liekens ☐ ON3RON, DXA64 kindly offered to do this and
the minimum is also to give him another big thanks !

73-Claudio I1RFQ

no problem. I'm just happy that an English group exists now.
But I think Ron deserves thanks too for suggesting an international group.

That is great news. Many thanks Ron for copying the files over to the English group!

Would have been helpful if Yahoo had offered an option to ZIP the entire contents of the file
section. Unfortunately, such an option does not seem to exist. :-(

Ron, if you need help in copying files, let me know.

Thanks Claudio .
I have downloaded an audio file with the signal of SAQ received last time the station was on air .
I used the first prototype of H102 and the ADA (Active Differential Antenna) and was playing along with the filters .

From: dxnature
Topic: 9 Message: 9

Hello,

Sorry I was stuck on the other int forum, hi. Again thanks to Claudio for making this possible.

Ralf, it's no problem for me to copy the files from the Italian CR forum as I got plenty of time at hand. I will do some tonight and teh rest will follow beginning nest week as I'm of for a nice weekend with other ham's and the spouses to a cottage in the Belgian Ardennes.

See ya,
Ron Liekens, ON3RON - DXA64

15. Radio St. Helena 'On Air'

Yahoo group: CiaoRadioNewsGroupInt
Date: 2007-12-13 09:15:58 UTC
From: Claudio
Topic: 15 Message: 15

Radio St. Helena is celebrating its special double anniversary year 2007 with a very special Radio St. Helena Day 2007 world-wide shortwave broadcast.

The year 2007 marks a double anniversary for Radio St. Helena - the 40th anniversary of broadcasting for Radio St. Helena, and - the 10th shortwave transmision anniversary.

Saturday, 15th December 2007

From
UTC to UTC Target area
1730 1815 New Zealand
1815 1900 India
1900 2015 Japan
2015 2145 Europe
2145 2245 North America East
2245 2330 North America West
2330 0015 South America North
0015 0100 South America Central/South

RSH will be transmitting on 11092.5 KHz in USB with 1000 Watts and using a 3-element monoband directional antenna.

There will be a VERY SPECIAL and beautiful full-colour QSL card issued by Radio St. Helena for this special DOUBLE ANNIVERSARY shortwave transmission.

The same procedures as in 2006 for reception reports, return postage, and QSLing will apply for this broadcast in 2007.

Watch our web page: www.sthelena.se/radioproject for more information.

With best greetings and wishes for good listening conditions,

Laura Lawrence
Station Manager of Radio St. Helena
Robert Kipp
Special Assistant to Laura Lawrence
Jamestown, St. Helena radio.sthelena@...

QSL INFO:
- Only reception reports sent by regular mail will be accepted.

- Email-reports will NOT be accepted.

- Return postage is absolutely required and is "at least" three IRC's or "Greenstamps".

- "At least" means that RSH welcomes donations at any time and in any amount.

Reception reports by regular mail only and including 5 USD or 5 Euros in banknotes are to be sent ONLY to the following address:

Radio St. Helena
P.O. Box 24
Jamestown
St. Helena Island
STHL 1ZZ
South Atlantic Ocean

Hi Claudio,

Thanks for the info! I did receive the transmission last year with a 43433 on the H101 who was the best out of three other radios (EKD315, NRD535 and Plessey PR155b). Why??? The exelent working sync lock!

I will complete the transfer of the files to the forum today.

Best regards,
Ron

Topic: 19 Message: 19

Hi Ron ,

I revert also to the group this topics because of common interest .

You are perfectly right in your analysis and I agree with you .

On the market there are opportunity , needs and styles .

Let me describe our strategy about .

H101 and H102 are a spinoff of our core activity and we have set a maximum time to devote to .

If not , we have to change core business

Our core business is the Broadcasting Market .

The practical consequence is that all our effort are to develop innovative technical tools , that is the thing that give us the best satisfaction and back spinoff on the Broadcasting market .

You have clearly highlighted one of those technical tools :

☐At moments I did see a twinkle in their eyes when they saw the impact of the notch on the received signal.☐

Please let me add some other possibilities :

1) DDS generator output

2) Two inputs and software to statistically compare two antennas

3) Automatic I&Q balance

4) A very smart innovative Denoiser

I don☐t follow the other software , but basically I am not aware that they have the same possibilities , why of course they have other .

Based on this the time that we spend on aesthetic issues is tremendously low , and you are right .

For Hams attracted from this important particulars , I would say H101 is absolutely not the product for them .

On the other side it looks that our products are very loved from Hams that like technical tools .

A the end I think that it is good so to have so many different products with so many different styles , so anyone could choose the most agreeable for him .

We can supply H101 also with I&Q outputs , so everyone could connect to a different and use other software if needed .

I can also drop to the list how to do this (one hole , one stereo jack , two resistors and two capacitors) .

I am not completely sure , but I can also think that other software that you cited could be used on the demodulation side connecting the I&Q outputs with Virtual cable .

Tuning has to be done anyway with the CR software .

Kind regards .

Claudio I1RFQ

A: Claudio Ré
Oggetto: Software toughts

Hi Claudio,

Past weekend I went on a relaxing few days to a chalet, with some friends and our family□s. As it goes, we started talking about radio as this is one of our common interests. Among other things we started a discussion about SDR□s, their funcionality and ease of operation. There were a wide range of international magazines on the table and in some of them there where reviews on the Perseus and Winradio G315 besides one of the recent Flexradio 5000. So I started up my Laptop with the H101 as to explain some functions and discus the results in comparison with a Yaesu FT-897.

On 90% the H101 did beat the FT-897 hands down as I expected. If the H101 would be a transceiver the guy□s would go for it! At moments I did see a twinkle in their eyes when they saw the impact of the notch on the received signal. The □fly by wire approach□ or wysywyg of the software was found very nice indeed as it is quite intuitive. But there was one important thing they did not liked, the graphics. The program on screen is not on par with, Perseus, Winrad and Winradio. Colors and design are a not looking well. I thing they mean the inability to make your own color settings the presentation of the signal metering and the absence of 3D on buttons etc Like Hamradio Deluxe is often used by ham□s, they took this as a reference. God knows how much development as done on this piece of software by more than one person so I find it not fair to compare.

As I□m used to it, and does not bother me, so it is just a observation from these guy□s from a commercial point of view. It needs to be more seductive as one said. I can imagine that a firm like Winradio has a very well paid

graphical designer in service to create an apetite, hi hi. You guys have to
do it all by your own, I know.

Tomorrow I will resume the copy of the files to the new forum, as by data
rate limit is reached this month and will be reset tonight.

73□s

Ron

From: dxnature
Topic: 23 Message: 23

Claudio,

If the H102 and the L101a are combined, will I still have the need of
my Plessey PV157 LF/VLF selectivity unit?

Hi Ron .

Absolutely not .

H102 direct digitized the signal from the antenna , there is no frequency conversion .

For this reasons doesn't suffer from harmonics of the local oscillator like direct conversion receivers do .

Oh, that is magnificent. The kind of rubble i get at the moment is tremendous. I use a 40 meter long wire into a Yaesu FRT-7700 matching unit and feed the signal into the PV157 selectivity unit to still get lots out of band junk. I look foward to the experience.

see ya,
Ron

29. Experiences with NDB reception?

Yahoo group: CiaoRadioNewsGroupInt
Date: 2008-01-05 22:31:31 UTC
From: dxnature
Topic: 29 Message: 29

Hello,

Are there some of you experienced with aeronautical NDB reception in the LW bands. I'm on a quest for technical information and succesfull setups. At the moment the construction of external passive square loop with 1.5 meter sides is proceeding very well, but there is still the question of how to construct a remote tuning. I dont like to run extra wires to the loop so control has to run via the coax. Is there still some préamplification needed to receive transatlantic signals. Any suggestions on this?

A friend advised me the use a Selective level meter for the dedicated frequencies and use the output to a receiver as the H101. Any comments?

All info is more than welcome!

Best regards,

Ron Liekens

Hi Ron .

I remember something similar to what you need on QST but am not able to tell you even the year .

If you place good low pass filters or have a selective loop , I don☐t see any particular reason to use another configuration .

H102 with two loops will be a must for the NDB and MW listeners .

Will start tomorrow to send the first board batch for production .

Claudio,

Many thanks for the info. I will start a search on the QST site to locate the artikel. Tomorrow I wil begin assembling my loop as the weather gives me the chance to do so. Things are just to big for my workshed. On saturday I was presented a Wandel&Goltermann SPM-30 selective level meter with a seductional pricetag. Could not resist the tempation :-) so I went for it.

There wil be low pass filtering but it is not yet decided what kind it will be, passive or active.

Thanks for letting me be on speed with the evolution on the H102!

Best regards,
Ron

32. [Ciao_Radio_newsgroup_] Compatible with Winradi 1.30

Yahoo group: CiaoRadioNewsGroupInt
Date: 2008-01-07 17:55:58 UTC
From: ReClaudio
Topic: 32 Message: 32

Hello Jabi .

If you want to use Winrad to demodulate , you can send the IQ data of Ciao Radio to Winrad trough Virtual Cable .

Tuning wibb be done with the Ciao Radio Software .
I am currently testing the last version 1.70 to release it as beta .

Please be advised that we have a new Ciao Radio International Group in English language : http://groups.yahoo.com/group/CiaoRadioNewsGroupInt/

34. CR+WinRad without VAC nor IQ

Yahoo group: CiaoRadioNewsGroupInt
Date: 2008-01-10 10:22:47 UTC
From: ic8pof
Topic: 34 Message: 34

Hello All.
I do not know if I have discovered the "Hot Water",
at this link :
http://ph.groups.yahoo.com/group/CiaoRadioNewsGroupInt/photos/view/bee7?b=1
I have uploaded the screen-pic of my discovery.
It is the result I am having after tweaking with my "brain -
screewdriver" in the programs configurations.
The band QRG is the IF of my FT1000Field, the same stations seen by
the CR are seen also by the WR. The audio output from WR is more
delayed than that on CR, but still usable .

All that WITHOUT the help of the VAC program nor IQ outputs.

Very simple game.....
Have I discovered the " Hot Water " ?
I suppose yes!
As there is no such feature described in all the previous messages of
both CR groups.

SOLUTION : I do not put it here now, as it is TOOO-SIMPLE.
If in a week no one would still not discover it, only than I will
write the solution.
Let your brain-screewdriver to discover it.

The needed new features to WinRad will be asked directly to
Alberto PHD.

Topic: 34 Message: 35

Hi Phil .

You can also make I think the same with other SW .

For example , if you set the input of Dream instead of virtual cable ,
directly to H101 , you receive the signal .

But the problem is that you don☐t have I&Q rejection and you will receive at
the same time the wanted band and the image superimposed .

I am not able to decide if in your picture if you have or not the rejection
of the image band and if the filters of your RX could help this process.

Please try with Ciao Radio directly connected to the antenna and check with
the spectrum full set in I&Q mode if you have or not image rejection with
your setup .

Hello Claudio,

Thanks for the reply! I did find the design of T.J. Nelson (third URL) to my taste. The sorry thing is that I can not find the varoctors here in Belgium, so I was looking elsewhere for a different solution to my problem.

I will seek the varactors on the net. Maybe they can be found on the net here in Europe.

Hi Ron .

You can surely find this varactors or similar here :

www. <http://www.rfmicrowave.it/> rfmicrowave.it

I bought them some time ago .

Claudio I1RFQ

Oggetto: Re: R: [CiaoRadioNewsGroupInt] Experiences with NDB reception?

Hello Claudio,

Thanks for the reply! I did find the design of T.J. Nelson (third URL)
to my taste. The sorry thing is that I can not find the varoctors here
in Belgium, so I was looking elsewhere for a different solution to my
problem.

I will seek the varactors on the net. Maybe they can be found on the
net here in Europe.

73'
Ron

Howdy Claudio,

Thanks for the URL!

I found a varicap, type SVC321 to be best suited for my loop control.
Using 4 of them paired up 2 by two gives me a range of 36 - 1300 Pf.
This is a nice tuning range for a passive loop.

I did read lots of user notes about people who made their own loops
stating that they used a pré-amp in the shack instead at the base of
the loop, but they did not argumented why. Have you any idea about this.

Greetings and 73,
Ron - ON3RON

From: Re Claudio
Topic: 29 Message: 43

Hi Ron .

I don☐t know .

Active components in a loop are typically used to achieve
balancing/unbalancing and or impedance matching .

At low frequencies the loss of the cable is negligible and will not affect
the noise .

Perhaps this could be the idea , because having active components in the
shack is much more easy for practical facts .

In any case I don☐t agree especially if the band covered by the loop is not
wide .

The main reason is that balancing/unbalancing and or impedance matching
could be achieved with passive components and noise figure at low
frequencies (let☐s say till 10 Mhz) is not an issue because the
atmospheric noise is much more than the internal noise of the active
components .

73-Claudio I1RFQ

Thanks Ismo .

Please check the v.1.78 that I have downloaded to the NG with new features , like the timer for automatic recorder .

For H102 I am checking the offers I have to exclusively sell it to the Broadcast , Measurement , Military market .

This is why for the moment I can☐t tell nothing more about for the Ham market .

73-Claudio

Hi Claudio,

Just to let you know that the ☐Desoiser☐ you have in the software produces some AMAZING RESULTS! I just have never heard such an impact before on the background noise!

EXCELLENT Work!

cheers, Ismo

P.S. Any news on H102?

Parhain terveisin / Best regards,

Ismo Kauppi

50. New SW version v1.78 downloaded

Yahoo group: CiaoRadioNewsGroupInt
Date: 2008-01-29 09:32:46 UTC
From: Re Claudio
Topic: 50 Message: 50

As you have seen , I have downloaded a new SW version v1.78bfor CIAO RADIO H101 .
Would be nice if you could check and report bugs to : reclaudio@alma.it
Please check on the History.txt what is new from your last version .
One on the major feature is the Recording Timer that allows to automatically record all the spectrum with a Start - Stop time .

All versions after v.1.56 work with Vista .
Please note that the most advanced versions could be more CPU consuming than for example v.1.44 (in some XP Professional the double) .
This could be solved with a patch on XP and a new different compilated software .
Next version will be in this way and will have a real setup .

Now please check with the Task Manager that your PC works possibly with a CPU occupancy less than 50 % .
While I test the software with CPU with occupancy around 100% for testing in the worst conditions , this is not a good situation for working indeed ...

I have also downloaded a document that describe how to use the software WINRAD with CIAO RADIO H101 .
This add the possibility to have very nice waterfalls that could be very helpful in many cases and a realtime CPU usage meter .
Please amend : CRTL+TAB with ALT+TAB in the document .

52. Program stalling and loud plopping sound

Yahoo group: CiaoRadioNewsGroupInt
Date: 2008-03-06 15:26:04 UTC
From: dxnature
Topic: 52 Message: 52

Hi,

A question for Claudio. As of a few months ago the H101 software sems to stall and makes a loud popping sound from the pc speakers. In the beginning it happened occasionally but now it comes to a point where I can no longer use the radio. I seemed to have started from build 152.

It semms to be triggered by sudden pulses in the reception, as strong cw is the most obvious. A closing lightning or passing scooters with ignition pulses where also noted to stall the program.

I will send you a mail with a sound file and a print screen of the XP fault warning.

I hope this can be resolved as i can no longer use my radio.

Greetings,
Ron

53. For reference

Good morning sir,

I did receive the activation-key,

My first impressions are very positive,in most situations the software-audioquality was better or about the same as: sdradio and winrad especially, the new denoiser on the

V1.78 version did the job.

Is ther any test- report of your loopantenna l101 ciaoradio, I searched on the internet but didn't find anything about it.

Kind regards:

Bert van Vessen

From: Re Claudio
Topic: 52 Message: 54

Hi Ron .

We exchanged several e.mails about and you told that the problem was only in your PC and you checked that all was working ok on another PC .

Hope this solved the hurdle .

In the mean time , please check that in the setup the TX MUTE is not selected .

We have recently found a bug on this option that could cause something similar to your problem .

Yahoo group: CiaoRadioNewsGroupInt
Date: 2008-05-11 21:59:57 UTC
From: ic8pof
Topic: 57 Message: 57

Hello All, here I come to let you know that it is possible to
use DM780 of HRD to receive digital modes with the CiaoRadio H101.
Just play around the audio config between H101 and DM780.
Very simple.
Have fun.

Yahoo group: CiaoRadioNewsGroupInt
Date: 2008-08-17 14:45:17 UTC
From: ik4gbu
Topic: 66 Message: 66

I downloaded the version 178 but I still have troubles.
It seems that I dont have connection betwenn the Software and the Hardware even if I see the H101 in boot Microphone and Speakers of the audio interfacing window and in the setup window of the 178.
I am hearing some noise but no signal is present also in the spectrum view.
What am I making wrong ??????

Hi Valerio . I am glad you sloved the problem .

In the mean time please download v.180b .

I have also downloaded v.180bVs (Visual studio) .

It is much faster with slow PC . Don't forget to install before Visual Studio that is attached with v.180bVs .

Ciao Valerio
Che ne pensi di Ciaoradio e il suo programma di controllo ?
Che
modello hai ?
Quali sono i costi , tempo fa' avevo pensato di comprare
qualcosa.

Parlando con I1RFQ , gli avevo detto che non mi piaceva il fatto di
non
poter controllare il tutto con la porta seriale del mio PC.
La mia radio
attuale e' su' in soffitta a circa 40 mt dal PC di controllo.

In effetti io
gia' possiedo qualcosa di Ciaoradio.
Claudio mi ha spedito il circuito
stampato del box di C.R.ed io ho montato sopra i conponenti
per farmi un
generatore programmabile (RS232) da 1 a 30 MHZ.

A: Ciao_Radio_newsgroup_@yahoogroups.com
Oggetto: Re: [Ciao_Radio_newsgroup_] DRM Dream

Hello,

I hope to remember the steps right...

to receive DRM with DREAM sw you have to:

1) install VAC (virtual audio cable - distributed with ciao radio sw)

2) configure the output of Ciao radio SW as a VAC (virtual audio cable) output

3) configure DREAM input to utilize the VAC input

4) configure the DREAM output to utilize your soundcard (real soundcard).

5) tune CIAO radio to DRM station and switch ciao radio mode to DRM

6) enjoy...

Bye bye, Stefano Simonetti (IW1RDZ)

85. R: LBs and UBs detection at the same time?

Yahoo group: CiaoRadioNewsGroupInt
Date: 2008-12-11 15:10:18 UTC
From: Re Claudio
Topic: 85 Message: 85

Hi Timo .
That is very a nice interesting suggestion .
It is a kind of binaural reception .
Oscar Steila that is the software designer reads this message and could think about this interesting suggestion .

Oggetto: LBs and UBs detection at the same time?

Hi Claudio!

I have been enjoying H101's LBs and UBs detectors a lot,
and started to wonder, would it be possible to change
the programme so, that it woud detect LBs to left audio channel
and UBs to the right channel at the same time?

Almost every time, after setting frequency by clicking the spectrum area with a mouse,
I need to press R button to get the frequency to full KHz.

If R button would work like toggle type switch, once pressed, would stay on, and if mouse pointer selection would automatically be full Khz or what ever is selected in 10 Hz ... 1 Mhz step selection.

For example if I select 4848.203 KHz with the mouse and the step selection is 1 KHz, frequency would atomatically be 4848.000 KHz.
If step selcetion would have been 5 KHz, frequency would be 4850 KHz.
Much easier, quicker and lots of work saved!

Is the any way to chage default bandwidth? 4 KHz to 2 KHz
By hex editing the programme file?

With Best Wishes, :-)
Timo Rousku

Dove si possono trovare informazioni in merito alla versione H102?
Io uso la versione H101 dal 2005 con ottimi risultati con il nuovo software e il winrad! il software H102 riconosce anche l'H101?
cordiali saluti a tutti e auguri sinceri di buon Natale a Voi e alle Vs famiglie.

Ciao Radio H102 e☐ un Hardware , non un Software .

Ovviamente e☐ corredato del suo apposito software .

Si tratta di un ricevitore a digitalizzazione diretta con due canali in parallelo .

Tanto per dirla in parole povere , immaginate una scheda audio stereo con due canali che partono praticamente dalla continua fino a 3.75 Mhz con due canali e 7,5 Mhz con un canale solo .

Il tutto a 16 bit .

Se ricordo bene nei files del gruppo ci dovrebbero essere delle presentazioni di H102 piu☐ le relative applicazioni ☐esoteriche ☐

Per quanto riguarda H101 sto testando la versione v.181 che ha in aggiunta un altro denoiser digitale (il terzo) .

Hi Claudio,

Just wanted you to know that I am currently running Windows 7 Ultimate Beta (Build 7000) and H101 + the software is just working great!

I am using the latest Virtual Cable at the moment (the free version).

Just if someone asks.

cheers, Ismo

Hi all,

I think I have seen some communications on experiencing harmonics on MW band with H101. I have a 250 meter lon wire antenna and I seem to get a lot of harmonics or at least stations on frequencies they should not be on.

Could you please direct me to the right dosc.
cheers, Ismo

105. is anybody using Linux?

Yahoo group: CiaoRadioNewsGroupInt
Date: 2009-10-22 20:33:04 UTC
From: renner.michael@rocketmail.com
Topic: 105 Message: 105

Moin,

I'm very new to SDR. I like the idea to use a USB link for a widen bandwidth like CiaoRadio do.
I wonder if somebody is using the H101 together with linux. Is there a linux software for this? Or does CIAOradio144.exe works with wine? The application start with wine 1.0. But before I buy the hardware I have to know if it will work with the receiver, attached to the USB port.

Thanks for any hint

Thanks a lot Franco .

I revert to the international NG your summary .

I think that Michael could use an automatic language translator .

73-Claudio I1RFQ

.....
.....

Ecco lo stato dell'arte delle prove.

Il software originale, nella versione "lite" cioe' l'ultima sviluppata, gira con Wine anche se c'e' del lavoro da fare nel setup di Wine per far funzionare bene la parte audio, compreso il controllo di H101. Le ultime prove sono state fatte alla fine dell'inverno con Ubuntu 8.04

Il programma da me fatto per controllare H101 funziona da 6 mesi senza particolari problemi. Richiede solo Python e Alsa. Io lo uso su Ubuntu 9.04 mentre Francesco lo usa con Fedora. Usa un semplice protocollo di rete per parlare con il mondo esterno.

La parte di DSP e' fatta con Dttsp.

La GUI per interagire con H101, se necessaria, puo' essere sia ottenuta con una versione delle varie GUI disponibili, estesa per controllare per particolarita' di H101 (antenna, DDS, IF Gain, Attenuatore) sia usando Quisk e giocandoci un poco (il DSP di Quisk ha gia' la correzione dello sfasamento di I&Q tipico di H101) sia infine con una GUI scritta ad hoc. Io ne ho fatta una con Python e PyGTK che sto usando e testando. Francesco ci gioca anche lui ma si tratta di una versione beta, ancora in fase di debug.

Ovviamente, per come e' fatto il controllo di H101, e' possibile controllarne le funzioni anche senza GUI, con altri programmi, con righe di comando, ecc. Sto ad esempio provando un controllo diretto da Hamlib, senza modificare hamlib ma semplicemente interfacciando la sua periferica di rete con H101.

Spero di essere stato utile e, se serve altro, sono qui

From: joe_joela1
Topic: 135 Message: 135

salve dopo di avere domandato informazioni a SISTEL Italia la sola cosa ricevuta e l'indirizzo Yahoo.
Ecco il moi problema con questo H101 che cio io quando faccio certi movimenti come cambiare la frequenza ho passare in Bw. Di 1-24 khz.
Il signale radio scompare non cé piu niente il signale bloca, devo andare su il setup fare solo OK, e tutto viene come avanti,
Questo arriva un poco spesso, cé anche il problema della antenna delle vote non arriva a trovare ne l'antenna 1 ne la 2.
Sul manuale non cio capito niente come fare per avere la DRM ho provato in tutti manieri non sono riuscito a ricevere niente che del QRM il suono del signale ricevuto nel modo DRM, con il programma DREAM cosa devo fare ? !
Mi potrebbe spigarmi meglio e piu chiaro come fare.
Unaltra cosa la sangronizazione del signale radio arriva con ritardo di 1 a 2 secondi.
Scusami ti chiedi si sono normale ma su il H101 la DDS uscita a cosa serve.
e possibile di trovare la lista delle frequenze della DRM, radio.
esiste uno programma piu ammegliorato in italiano.ho cia preso la ver 181b. inglese
Speranto che mi sono spiegato abastanza chiaro, scusa per gli errori di critto.
grazie
